

# BRAKE LEVER FS2001

Braking with comfort and safety.

No more tedious mechanisms that hit your leg or interfere with the steering action. The new FS2001 Brake Lever, revolutionary and unique in its ergonomic design, offers adjustability to the height and angle of the lever, optimising driver position thanks to the ball-mount bracket. Perfectly blending with the vehicle's interior, leaving the original look of the car unaltered. Braking is achieved by simply pushing the lever away from the body in the direction of the brake pedal. The brake locking function enables the driver to relax the hand/arm when stopping at traffic lights. It has an optional keypad including lights, indicators, and horn.

BRAKE LEVER INCLUDING  
INDICATORS / LIGHTS /
