Research & evidence-based Driver Education Programs

- Craig Waters researched globally over 7 years, why are drivers not able to drivesafety? is it a human's inability? or a failed instructor education system?
 - Can humans learn to drivesafety, the answer was, "YES" if we teach them effectively. Are they currently being taught effectively "NO", instruction has been shown in research to be a completely ineffective training system.
 - Developing a 5 Star driver education curriculum, pedagogically aligned standardised & structured training system delivered in a Graduated Education System GES.
 - Resulting in Australia's most successful life changing Driver Education initiative in 50 years. Neurodiverse & Neurotypical learning styles, same outcome different journey.
1. **Idrivesafety Coach**ⁱ Australia's highest trained driving coaches, engaging, encouraging, challenging and motivating participants. Reimagining theory!
 - a. Developing active participants not passive consumers.
 2. **Delivery methodology**ⁱⁱ. Client-centred learning. We do not homogenise the delivery, 1 on 1 coaching allows us to identify each client's learning style & match the delivery methodology to the client. *Artists and engineers learn differently.*
 3. **Curriculum**[©]. "A safe, detailed & structured pedagogical curriculum."
 - a. 3 foundations, 17 core subjects, 52 modules & 896 units of Competency Based Education & Training CBET.
 - b. Delivered in a Graduated Education System. GES. Structured training program.
 - c. Every process is detailed allowing theory to become **Knowledge**, repeating each process until a **Foundation** is formed then applying in a variety of same interactions (i.e. roundabout level 1) at variable locations until **Automated with distractions**.
 4. **eLearning programs** for **learner permit, hazard perception test** & supporting the learning journey. Real footage not Fake/simulation. 1on1 remote learning. The brain is empowered as learnt becomes learned with real road user footage supporting theory transfer.
 5. **Calibrating Success**.
 - a. Success is initially measured against a coach's ability to facilitate each participants ability to transfer knowledge of a process into an action that's self-calibrated.
 - b. Success is ultimately measured against each participant achieving ZERO INJURIES! the only acceptable measurement of success post licence.

"The OLD Problem"

Global research shows driving instruction has for 50 yearsⁱⁱⁱ been an inadequate system to train all drivers. Each instructor makes up their own system using tips & tricks to pass a test that can have no interaction with any road user and say you passed? Increased crash risk with teens who think they know what they were never taught. A Disparaging and negative impact when training disabilities/ Neurodiverse blaming you for their inability to teach your learning style. "Driving Instructors receive as little as 2hrs Training"
