"Give the gift of life" Bespoke 5-Star Driver Education

idrivesafety has disrupted the old-school defensive driving days simulation is fake, off-road swerving to avoid safety cones (the research shows this old system increases crash risks for teen drivers) and developed a world leading defensive driving course that has a measurable impact in increasing your safety and reducing the road toll. All driving is conducted 'on road' in a 'live and dynamic environment' in dual controlled cars, enshrining a safe process for every road user interaction, regardless of fault. Why is this process-driven system critical? Because injuries don't care who was at fault.

What's the difference?

Our coaches personally engage and challenge each client individually to be an active participant using adult coaching methodologies, whilst analysing & identifying safety gaps in each clients driving processes. They then deliver a safety solution tailored to the needs for each road user interaction. We use Australia's most advanced competency based 5-Star Driver Education Curriculum with almost 900 units of Performance Based Compliance Training (PBCT). We also apply effective globally researched processes.

idrivesafety coaches select an environment that matches the desired safety outcome empowering and challenge you to drivesafety. idrivesafety has a long and significant history of success with Learners, Anxiety, Crash Rehabilitation, P Platers, Fleet, Disabilities, Neurodiverse & Neurotypical drivers, same outcome different journey.

What makes idrivesafety Course effective?

The evidence shows idrivesafety has changed the paradigm from increasingly high crash rates to 'zero' being or expected and demonstrated outcome, regardless of the learning style. One of the many missing links in old school instruction was the nonexistence of a process driven pedagogically aligned curriculum with a learnable safe process for each road user interaction.

Evidence shows that our education programs guarantee to significantly reduce crash rates for all driving groups. You don't know what you don't know! We don't self-teach what we don't know. Our curriculum has a safe process for all road user interactions.

In their first six months of licensed driving, our graduates have a significantly lower crash rating than all other new drivers. Our fleet clients also experience zero injuries. The disability coaching team are actively empowering and changing lives beyond all previous expectations, **“Different Learning Style - Different Delivery Methodology - Same Outcome”**, In contrast Australia is living in a climate that has crashes and injuries trending up.

Humans can drivesafety! However? only if they receive an effective driver education and testing system. This is currently not happening in Australia as shown in the road toll.

Defensive Driving Courses ©

Overwhelmingly, our history at idrivesafety training has shown us through 16K past clients with many fully licenced drivers stating “they thought they were driving safely” yet after completing our 5-star training said they had no idea the number of risks that were experiencing all around. It made them not only aware of the risks that they had never realized existed, but they are now equipped with a safe manageable process for each potential risk, thus lowering crash risks and anxiety.

Saying “I am confident” is not the same as, saying “I am competent”,

” I think it’s safe” is not a solution “I know it’s safe because I understand the risks and I am actively applying safe driving processes”.

- Recognise where, why and how road users’ crashes occur,
- Proactively utilise safety strategies,
- Implement simple and effective risk reducers through knowledge gathering, to minimise the risk of being involved in a motor vehicle related crash, regardless of who is at fault.
- Self-calibrate Vision zero”, “Drive Safety”, Determine an “Exit strategy” & consider “What If” processes.

What makes idrivesafety Australia coaches effective?

idrivesafety Australia trains high calibre professionals to become driving coaches. Our coaches are at the very top of their field. They have undertaken significantly more training, 2000% more than industry peers. They gain a comprehensive education in delivery methodologies, identifying clients learning styles, referencing Australia’s most effective and comprehensive structured Driver Training Curriculum.

The 5 most common Road User interactions and where crashes occur

1. Traffic lights
2. Crossroads
3. Lane changes
4. Roundabouts
5. Freeway highway, country roads

Road law what’s really the 5 most common used and misunderstood rules.

Clients are taken out of the car to observe and analyse live processes that most drivers never identify or master in areas such as vehicle body language, gap selection processes for safe interaction with traffic streams, empowering an ability to drivesafety, automating each process that is self-calibrating safety, laying the ‘foundation’ for continued safe driving. Factors such as personal risk taking, training methodology, learning style, environmental risk, distractions internal and external, vehicle dynamics, road law, continuous calibration, eco driving, risk management, journey management, SOP standard operating procedures, interaction with other road users and the driving environment, have all been built into the curriculum.

All courses are ‘bespoke’ i.e. tailored to each client’s needs, drawn from the almost 900 units of PBCT.

Contact to discuss your needs and how we can help you reduce the road toll.
